Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Nanopharmaceuticals market for 2018-2023. Nanopharmaceuticals are colloidal particles of 10 to 1,000 nanometers (1 micron) in size. They are widely used in drug delivery. Nanopharmaceuticals are diverse both in their shape and composition and often offer an advantage as compared to their “bulk” counterparts primarily because of size.

There are two types of nanopharmaceuticals: (1) those where the therapeutic molecules are themselves the drug (i.e., the therapeutic compound itself also functions as its own carrier); and (2) those where the therapeutic molecules are directly coupled (functionalized, entrapped, or coated) to a nanoparticle carrier.

USA is a huge market, and the total sum of the industry is more than 8756.7 million USD in 2015. At the same time, this industry continuously increases, with the development of global economy.

USA is the largest market of nanopharmaceuticals, which occupies 60.69 percent of global nanopharmaceuticals market share in 2014. It is followed by Europe, which has around 33.37 percent of the global total industry. Other main regions which take important part in this industry include Japan and China.

The relatively-mature technology is NanoCrystals™, DissCubes® and Nanopure®. The carrier includes nanospheres, nanocapsules, solid lipid nanoparticles, microemulsion, nanoliposome, magnetic nanoparticles, polymeric micelles, dendrimers, and inorganic nanometer carrier.

Over the next five years, LPI(LP Information) projects that Nanopharmaceuticals will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx

million in 2017.
