The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Navigation Satellite System (GNSS) market for 2018-2023.

Global Navigation Satellite System (GNSS) is the infrastructure that allows users with a compatible device to determine their position, velocity and local time by processing signals from satellites in space. GNSS signals are provided by a variety of satellite positioning systems, including global Constellations and Satellite-Based Augmentation Systems. Global Navigation Satellite System (GNSS) plays a significant role in high precision navigation, positioning, timing, and scientific questions related to precise positioning. Of course in the widest sense, this is a highly precise, continuous, all-weather and a real-time technique.

American GPS technology and WAAS system in the global GNSS industry is the most important, the most comprehensive, the most used. Although in recent years, China and the European GNSS industry is developing rapidly, but in quite a long period of time, the United States will remain the GNSS service in various corners of the globe.

Japan's internal market has been APAC's largest for a while and served by GPS-based augmented systems, such as MSAS, and in the future by QZSS (seven satellites are expected in orbit by 2020). With a bandwidth-hungry and tech-savvy consumer base, Japan is a big, attractive GNSS market, but difficult to penetrate due to local dominance. It is understood that entering the Japanese market is medium risk, high cost, with high expectations from customers and prospects for long-term returns.

Over the next five years, LPI(LP Information) projects that Navigation Satellite System (GNSS) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023,

from US\$ xx million in 2017.
