Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Next Generation Wireless Communication market for 2018-2023.

Wireless is a unique technology. Despite being over a century old, it continues to improve at an ever-increasing rate. Yet all the past, present and future improvements stem from one underlying process: better engineering leading to more precise use of space and time.

A set of new technologies are just coming into early use: 802.11ac promises a Gigabit per second from a single access point; LTE-A is cutting out a path out to full mobile broadband integrated with direct local device-to-device communications; and smart spectrum reuse is easing the bandwidth crunch. Further out, the promise of terabit systems combines with innovative reuse of existing ideas to provide more services further afield than ever before.

Over the next five years, LPI(LP Information) projects that Next Generation Wireless Communication will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
