Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Non-Radioactive Nucleic Acid Labeling Product market for 2018-2023.

In recent years, non-radioactive nucleic acid labeling and detection methodologies have become available in response to a desire by researchers and their institutions to move away from the use of radioisotopes. Advancements made in the areas of chemiluminescence and fluorescence have allowed for an easier transition. In non-radioactive assays, signal is generated through an enzymatic reaction with a chemiluminescent or chromogenic substrate; alternatively, detection can occur through the appropriate excitation and emission of a fluorophore-labeled probe.

The classification of non-radioactive nucleic acid labeling product includes biotin, DIG system, fluorescent and others. The proportion of DIG system in 2017 is about 33%, and the proportion is in increasing trend from 2013 to 2017.

Non-radioactive nucleic acid labeling product is widely used in DNA labeling, RNA labeling and oligonucleotide labeling. The most proportion of non-radioactive nucleic acid labeling product is used for DNA labeling, and the proportion in 2017 is about 56%. United States is the largest sales place, with a sales market share nearly 43.73% in 2017. Following United States, Europe is the second largest Sales place with the Sales market share of 26.79%.

Over the next five years, LPI(LP Information) projects that Non-Radioactive Nucleic Acid Labeling Product will register a 7.5% CAGR in terms of revenue, reach US\$ 370 million by 2023, from US\$ 240 million in 2017.
