In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Nonthermal Pasteurization market for 2018-2023.

The non-thermal pasteurization, also known as cold pasteurization can be defined as an alternative food processing technology that entails highly sustainable and efficient processes to convert raw food items into products suitable for human intake. Robust growth in the demand for non-thermal or cold pasteurization technologies can be attributed to the rising concern for food safety coupled with emerging demand for processed food containing active ingredients. Growing consumer appetite for tastier and additive-free food products with longer shelf life, natural color & texture are boosting the sales of luxury & cold pressed juices, subsequently surging the global non-thermal pasteurization market.

Over the next five years, LPI(LP Information) projects that Nonthermal Pasteurization will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
