In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Nurse Call Systems market for 2018-2023.

This report studies the Nurse Call Systems market, a nurse call system, sometimes referred to as a “call bell” system, provides a primary means of communication between patients and nurses. Historically, systems were designed for a single method of patient-to-nurse communication, where the patient pushed a button that triggered a call light and generated a tone at the nurse’s desk. Over the years, nurse call system technology has evolved from stand-alone, fairly simplistic systems to robust, integrated platforms with voice communications. Today, a nurse call system serves as the core component of what has come to be known as a healthcare communications platform.
In this report, the Statistical products include the Software systems and hardware systems for Nurse Call Systems in the United States markets.
By connecting nurses to patients and other healthcare providers, the demand for increasing healthcare services and the inability to offer a better patient response can be fulfilled. Hospitals are funding to update existing technology and infrastructure for better patient care. For instance, in March 2016, Monmouth Medical Center received USD 10 million funds to update its nurse call systems and overall infrastructure to offer a better patient experience.
Wireless technology is identified as the fastest growing technology segment over the forecast period. Key factors attributing to its rapid growth include the higher level of system integration, better patient mobility, and reduced cost for installation as compared to wired technology. Patient mobility is crucial for senior living facilities and assisted living facilities, where caregivers are away from the patients. In such cases, wireless
