## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Off-The-Road Tyre market for 2018-2023.

OTR Tires (Off-the-road tires) are utilized for large-scale machinery at construction and mining and other sites with no roads. These tires mainly made with premium casings and durable compounds. Off-the-road tires offer substantial support for machinery used at various civil engineering sites, including ultra-large dump trucks, earth and gravel at mining and dam construction sites, bulldozers for earth removal and graders for road construction and snow removal.

The production and sales volume of OTR tires is directly affected by downstream industries and global economy. Over the past six years, the market of construction and mining equipment has experienced fast growth and decline, as well as the OTR Tires market. The demand of OTR Tires reached a peak in 2013, just as what the construction and mining equipment industry experienced. And over the past two years, the OTR tires industry has faced decline which seems almost hard to bear for related enterprises.

As the global economy growth rate is forecasted to slow down, especially in China, which is one of the largest markets of OTR Tires; the market of OTR Tires in the following five years seems will not enjoy that fast growth. But as the market in India, Africa and some other developing regions is also promising, the industry of OTR tires is forecasted to recovery after 2016, though it will not grow as fast as what happens before 2013.

Over the next five years, LPI(LP Information) projects that Off-The-Road Tyre will register a 3.6% CAGR in terms of revenue, reach US\$ 14500 million by 2023, from US\$

11800 million in 2017.
