Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Offshore Wind Turbine Installation Vessel market for 2018-2023.

Self-propelled jack-up vessel is a vessel specifically designed for the installation of offshore wind turbines. Similar to a jack-up rig it is self-elevating. To enable quick relocation in the wind farm it is self-propelled. It also has a slender ship shaped hull to achieve a quick turnaround time with the vessel carrying several foundations or wind turbines each time. Azimuth thrusters are used to position the vessel during jack-up operations.

Driven by the increasing demand of constructing offshore wind farm with higher requirements on capacity and efficiency, the demand of specially designed vessel is facing a sudden increase. But in root, offshore wind turbine installation vessel is not a common used equipment; the fleet size will never be enough large for every ship builder to have chance to achieve an order. The market competition of ship building is quite fierce worldwide currently; for the building of offshore wind turbine installation vessel, the competition is surely forecasted to be fierce.

The advantages or benefits of wind power, is unnecessary to mention again. And we think that nobody would doubt there is vast market for wind power. The game of offshore wind power is just at the beginning, as well as the good days for offshore wind turbine installation vessel runners.

Over the next five years, LPI(LP Information) projects that Offshore Wind Turbine Installation Vessel will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
