In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Oligonucleotide Pool market for 2018-2023.

Oligonucleotides are short DNA or RNA molecules, oligomers, that have a wide range of applications in genetic testing, research, and forensics. Commonly made in the laboratory by solid-phase chemical synthesis, these small bits of nucleic acids can be manufactured as single-stranded molecules with any user-specified sequence, and so are vital for artificial gene synthesis, polymerase chain reaction (PCR), DNA sequencing, library construction and as molecular probes.

Oligonucleotide therapeutics have attracted drug manufacturers to guarantee lower drug advancement costs, and the capacity to achieve targets that are not achieved by traditional small molecule drugs. Various clinical candidates have progressed, and a few drugs seem balanced for regulatory approvals. Large pharmaceutical organizations appear to once again investing and putting resources into oligonucleotides through authorizing licensing deals, partnerships, and acquisitions.

Over the next five years, LPI(LP Information) projects that Oligonucleotide Pool will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
