## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Omega-3 Encapsulation market for 2018-2023.

Omega-3 long-chain polyunsaturated fatty acids such as docosahexaenoic acid (DHA), eicosapentaenoic acid (EPA), and alpha-linolenic acid (ALA) are very popular within the dietary supplement sector for their ability to help maintain normal heart function (EPA and DHA), normal blood cholesterol levels (ALA), and eye and brain health benefits (DHA). However, the propensity of omega-3 oils to turn rancid and develop a characteristic fishy smell and taste may negatively impact consumer appeal. Softgel capsules dominate the omega-3 oil supplement market as the encapsulation procedure is very compatible with the oil, and consumers have become very comfortable with the format. The products are convenient, have a long shelf life, and are not as messy as bottles of liquids. In the highly competitive market of dietary supplements, new innovations around dosage forms can increase the appeal of products among consumers. Dose forms that do not require water, such as chewable capsules, have large consumer appeal in general and especially for populations that have trouble swallowing, such as the elderly and young children. Formulations allowing for the development of such a product would require more concentrated fish oil ingredients and suitable taste masking additives, and could afford a step change for the specific market, similar to when softgels were introduced, replacing liquid dosing. Over the next five years, LPI(LP Information) projects that Omega-3 Encapsulation will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
