Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Organic Soymeal market for 2018-2023.

Soybean meal is used in food and animal feeds, principally as a protein supplement, but also as a source of metabolizable energy. Some, but not all, soybean meal is produced from the residue left after oil extraction. Removal of the oil, which is used mostly in food, but also for industrial oils, soaps and biodiesel, involves crushing and either pressing or solvent extraction. Some, but not all, soybean meal contains ground soybean hulls. Soybean meal is heat-treated during production, to denature the trypsin inhibitors of soybeans, which would otherwise interfere with protein digestion.

High nutritional value of organic soymeal and major application as a protein supplement due to high protein content is likely to drive the global organic soymeal market over the forecast period. Additionally, high demand for defatted soybean meal is anticipated to further propel the growth of soybean meal market.

Over the next five years, LPI(LP Information) projects that Organic Soymeal will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
