In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Organic Sugar market for 2018-2023.

In recent years, interest in organic sugar has increased as more people become concerned with the potential health hazards of eating refined and processed foods. There are some distinct differences between organic and white sugar.

The term organic is actually used to indicate the farming methods used to grow the sugarcane or sugar beets from which the sugar is obtained. White sugar, in addition to being processed in a way that removes all traces of its natural molasses content, is usually obtained from sugarcane or sugar beets grown in fields utilizing commercial chemical pesticides and herbicides. Refined organic sugar will share the same basic flavor as refined white sugar. Organic raw or natural sugar, however, does have a distinctive flavor difference, caused by the natural molasses content in each sugar crystal.

Over the next five years, LPI(LP Information) projects that Organic Sugar will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
