Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Orthopedic Implant Antibacterial Coatings Surface Treatment market for 2018-2023.

Orthopedic implants containing antibacterial coating inhibits the growth of microorganism on the implants to prevent infection within the body. Growth in awareness regarding bacterial infections, increase in demand for coated implants to prevent infection, and rise in prevalence of bacterial infections drive the market growth. However, health concerns using titanium as a coating material for implants and high cost of coatings restrain the market growth. Moreover, development of effective antibacterial implants and growth opportunities in the emerging economies of Asia-Pacific and LAMEA are expected to provide numerous opportunities for the market growth during the forecast period.

Over the next five years, LPI(LP Information) projects that Orthopedic Implant Antibacterial Coatings Surface Treatment will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
