In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Outdoor Heating market for 2018-2023.
Outdoor Heater, also called Patio Heater, (also called a mushroom or umbrella heater) is an appliance for generating radiant heat for outdoor use.
A burner on top of a post, burns liquefied petroleum gas (LPG), propane or butane, and directs the flames against a perforated metal screen. Heat is radiated from the surface of the screen in a circular pattern around the appliance. A reflector atop the burner reflects heat that would be otherwise lost upwards. This is because the reflecting hood is usually silvered which makes it a poor absorber/emitter of heat but excellent at reflecting infra-red radiation back. This reduces the amount of heat lost by conduction as silvered surfaces will not absorb infra-red light.
Outdoor Heating product demand market there is also a certain space, but basically showing the scarcity of high-end products, low-end products, excess capacity, there is a large market demand for high-end products to seize market share of imports acts. Despite the presence of competition problems, due to the recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field.
As large demand of high-end products at abroad, many companies Technology has been mature.

Over the next five years, LPI(LP Information) projects that Outdoor Heating will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.
