Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Overall Turbochargers market for 2018-2023.

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. The turbocharger has four main components, the turbine, the compressor, the control system and the bearing system.

Turbochargers are useful in helping the automotive industry to meet the norms and standards regarding the emission of exhaust gasses such as CO₂, nitrous oxide, and particulate materials from the automobile. Augmentation of the engine with a turbocharger helps in addressing the increasing demand for fuel-efficient vehicles from consumers.

Major players of the turbochargers market include Borgwarner Inc., Honeywell International Inc., Mitsubishi Heavy Industries Ltd, IHI Corporation, Continental AG, and Cummins Inc. to name a few. The top 5 manufacturers occupied about 82% market share. These companies are trying to introduce new technology in the market through innovation and new product development. Apart from this, they are taking initiatives to engage themselves in partnerships and alliances in order to expand their business in emerging markets such as India and China.

Over the next five years, LPI(LP Information) projects that Overall Turbochargers will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
