Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Overhead Cranes market for 2018-2023. Overhead Cranes is a type of crane found in industrial environments. An overhead crane consists of parallel runways with a traveling bridge spanning the gap. A hoist, the lifting component of a crane, travels along the bridge. If the bridge is rigidly supported on two or more legs running on a fixed rail at ground level, the crane is called a gantry crane (USA, ASME B30 series) or a goliath crane (UK, BS 466).

China occupied 51.42% of the Asia-Pacific consumption market in 2017 with a CAGR of 1.38% for the past four years. India also shows strong growth momentum.

For price trend analysis, a key variable in the performance of Overhead Cranes producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

For forecast, the Asia-Pacific Overhead Cranes revenue would keep increasing with annual growth rate with 2~3%. We tend to believe that this industry still has a good future, considering the current demand of Overhead Cranes.

Over the next five years, LPI(LP Information) projects that Overhead Cranes will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
