The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Ozone Disinfection Machine market for 2018-2023.

Ozone disinfection machine, namely ozone generator, is a device that produces ozone gas, which is then released into an area containing either air or water to kill microorganisms and remove odors. ozone disinfection machines are used to purify air or water, destroying bacteria and removing many undesirable substances. Often, they use high-voltage electricity to produce ozone.

In our report, we define the ozone disinfection machine as ozone generator system that is consisted of feed gas systems, ozone generators, ozone generator cooling, ozone water mixing/contacting, ozone vent gas treatment, ozone decomposition systems, ozone residual removal, ozone water treatment system Instrumentation and others. We only count ozone disinfection machine which can be used in water treatment of chemical factories, waterworks and swimming pools and we converted different ozone production of ozone generator into 10kg/h ozone production of ozone generator.

Ozone disinfection machine, namely ozone generator, is a device which can produce ozone. Owing to strong oxidizing and disinfection, it usually is used in water treatment of chemical factories, waterworks and swimming pools. Due to the different production of ozone, its price is diverse greatly. Generally speaking, the production of ozone is bigger; the price of ozone generator is higher. In water treatment industry, the most common ozone production is about 10kg/h. In our report, we converted different ozone production of ozone generator into 10kg/h ozone production of ozone generator.

Global demand of ozone disinfection machine will increase to 1715 units in 2015 from 1157 units in 2010. It is estimated that supported by downstream industries, global

demand of ozone disinfection machine demand will keep increasing with an average growth rate of 8.19% in the coming five years. In addition, similar with that of globe, the demand of ozone disinfection machine in China will increase from 347 units in 2010 to 622 units in 2015, accompanied with an average demand growth of 12.39% in the coming five years.

Over the next five years, LPI(LP Information) projects that Ozone Disinfection Machine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
