In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Parts Washer market for 2018-2023.

A parts washer is a piece of equipment used to remove contaminants or debris, such as dirt, grime, carbon, oil, grease, metal chips, cutting fluids, mold release agents, ink, paint, and corrosion from workpieces. Parts washers are used in new manufacturing and remanufacturing processes; they are designed to clean, degrease and dry bulk loads of small or large parts in preparation for assembly, inspection, surface treatment, packaging and distribution. Parts washers may be as simple as the manual "sink-on-a-drum" common to many auto repair shops, or they may be very complex, multi-stage units with pass-through parts handling systems. Parts washers are essential in maintenance, repair and remanufacturing operations as well, from cleaning fasteners, nuts, bolts and screws to diesel engine blocks and related parts, rail bearings, wind turbine gears boxes and automotive assemblies.

The North America (US, Canada and Mexico) Parts Washer market is relatively low concentrated as the manufacturing technology of Parts Washer is relatively lower than some washer equipment. Some enterprises are well-known for the wonderful performance of their Parts Washer and related services. The leading players Safety-Kleen, Cleaning Technologies Group, Karcher Cuda are remarkable in the North America Parts Washer industry because of their market share and technology status of Parts Washer.

The consumption volume of Parts Washer is related to downstream industries and North America economy. There are many manufactures in this field. The North America consumption value of Parts Washer will increase from 347.56 million USD in 2017 to

427.47 million USD in 2023, with an annual growth rate of 3.51%.

The largest Market of Parts Washer is United States, with market share of about 83.60% in 2017, followed by Canada and Mexico, with market share of 12.10% and 4.30%.
