The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Passive and Interconnecting Electronic Components market for 2018-2023.

This report studies the Passive and Interconnecting Electronic Components market. Passive electronic components are those that don't have the ability to control current by means of another electrical signal. Examples of passive electronic components are capacitors, resistors, inductors, transformers, and diodes. Generally, electrical connector is a device that connects two active devices, transmitting current or signals. The Passive and Interconnecting Electronic Components industry concentration is not high; there are more than one thousand manufacturers in the world, and high-end products mainly from USA, Japan and European.

The international leading companies such as APP who prefer setting up factories directly into aimed market, and taking own sales department to expand market. The giant companies are more likely to set their own big agents in some major countries and regions taking charge of regional business building their international market position. Companies in developing countries such as China and India, in contrast, put more effort on direct selling business. They can act as exports at the same time, and it is a common phenomenon in this industry. As they do not have that much international brand influence, their product quality is not good enough when comparing with leading companies, however, they have price advantage. They like to expand their market share in developing countries and low-end international market.

In the Passive and Interconnecting Electronic Components market, there still has a distinct feature that the import and export rate of this industry is not high caused by the fact that many international manufactures expand their business through building

factories or investments.

Over the next five years, LPI(LP Information) projects that Passive and Interconnecting Electronic Components will register a 4.2% CAGR in terms of revenue, reach US\$ 33300 million by 2023, from US\$ 26000 million in 2017.
