In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Peripheral Nerve Repair market for 2018-2023.

Peripheral nerves provide the pathways for both motor and sensory signals throughout the body and physical damage to a peripheral nerve or the inability to properly reconnect nerves can result in the loss of muscle function and/or feeling. Nerves can be damaged in a number of ways. When a nerve is cut due to a traumatic injury or surgery, functionality of the nerve may be compromised, causing the nerve to no longer carry the signals to and from the brain to the muscles and skin and reducing or eliminating functionality.

Nerve damage or discontinuity of this type generally requires a surgical repair.

On the basis of geography, the global nerve repair and regeneration market can be segmented into North America, Europe and Rest of the World. Due to a large patient population and increase in the incidence of nerve injuries, North America is deemed to be the key contributor towards the growth of the market.

Over the next five years, LPI(LP Information) projects that Peripheral Nerve Repair will register a 21.0% CAGR in terms of revenue, reach US\$ 290 million by 2023, from US\$ 91 million in 2017.
