## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Peripheral Pulse Oximeters market for 2018-2023.

Pulse oximetry is a noninvasive method for monitoring a person's oxygen saturation (SO<sub>2</sub>). Its reading of SpO<sub>2</sub> (peripheral oxygen saturation) is not always identical to the reading of SaO<sub>2</sub> (arterial oxygen saturation) from arterial blood gas analysis, but the two are correlated enough within an acceptable deviation such that the safe, convenient, noninvasive, inexpensive pulse oximetry method is valuable for measuring oxygen saturation in clinical use.

Over the next five years, LPI(LP Information) projects that Peripheral Pulse Oximeters will register a xx% CAGR in terms of revenue, reach US\$ 700 million by 2023, from US\$ 700 million in 2017.
