In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Personal Electronic Die Cutting market for 2018-2023.
Die cutting machines are machines that cut shapes out of paper, chipboard, fabric and other materials. Most people who die cut regularly have personal die cutting machines. These machines can sit on top of the crafting table or work space or can be stored in a small area and brought out when needed. Just like any other appliance or tool, there are a variety of brands of die cutting machines, and each differs slightly from the other.
Electronic Die Cutting (Digital die cutting) machines are powered by electricity and are controlled by computer software or cartridges. Digital cutters do not require steel dies because they have a blade inside the machine that cuts the paper or other materials.
North America is the largest consumption country of Personal Electronic Die Cutting, with a sales revenue market share nearly 54.69% in 2017.
The second region is Europe, following North America with the sales market share of 38.70% in 2017.

Over the next five years, LPI(LP Information) projects that Personal Electronic Die Cutting will register a 5.4% CAGR in terms of revenue, reach US$ 900 million by 2023, from US$ 660 million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Personal Electronic Die Cutting market by product type, application, key manufacturers and key regions.
