In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Petroleum Asphalt market for 2018-2023. Petroleum asphalt is a sticky, black and highly viscous liquid or semi-solid that is present in most petroleum crude oils and in some natural deposits. Petroleum crude oil is a complex mixture of a great many different hydrocarbons. Petroleum asphalt is defined as that part of crude oil which is separated from the higher-boiling hydrocarbons in crude oil by precipitation upon the addition of lower-boiling hydrocarbon solvents such as propane, pentane, hexane or petroleum asphalt. The precipitated material consists of asphaltenes which have an average molecular weight of about (800 - 2500 g/mole) and exist in the form of flat sheets of polyaromatic condensed rings with short aliphatic chains.

Currently, there are several producing companies in the world petroleum asphalt industry. The main players are ExxonMobil, Shell, Cnooc, Sinopec, ConocoPhillips, CRH and Pasargad Oil Company. The global production of petroleum asphalt will increase to 180.26 M MT in 2018 from 134.64 M MT in 2013 with average growth rate of 6.01%.

In consumption market, North America, Europe and China are the mainly consumption regions due to the bigger demand of downstream applications. In 2017, these three regions occupied 66.23% of the global consumption volume in total.

Petroleum asphalt has two grades, which include paving petroleum asphalt and industrial petroleum asphalt. And each type has different application people and places relatively. With versatility of petroleum asphalt, the downstream application industries will need more petroleum asphalt products. So, petroleum asphalt has a huge market potential in the future.

The major raw materials for petroleum asphalt are crude oil. Fluctuations in the price of crude oil will impact on the production cost of petroleum asphalt. The production cost of petroleum asphalt is also an important factor which could impact the price of petroleum asphalt.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents fluctuation according to the economy development status and international competition. Also, there is fluctuation in gross margin.

Over the next five years, LPI(LP Information) projects that Petroleum Asphalt will register a 6.9% CAGR in terms of revenue, reach US\$ 72700 million by 2023, from US\$ 48800 million in 2017.
