## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Petroleum Needle Coke market for 2018-2023.

Petroleum needle coke is a needle-shaped carbon material produced by heating raw petroleum coke (a solid carbon derived from cracking of heavy oil), and is mainly used as the aggregate of artificial graphite electrodes in electric arc furnaces for the iron manufacturing industry.

According to the raw material difference, needle coke is divided into petroleum-based and coal-based. Globally, ConocoPhillips is the biggest manufacturer of petroleum-based needle coke and C-Chem is the biggest manufacturer of coal-based needle coke. In China, there are only two petroleum needle coke manufacturers in China, including CNPC Jinzhou Petrochemical and Shandong Yida New Material. Shandong Yida New Material started production since August 8th, 2017. Production base of those two suppliers are separately in Liaoning and Shandong province.

Petroleum needle coke is mainly used in ultra-high power electrode and special carbon materials for steel industry. Ultra-high power electrode is the largest consumption field with consumption amount of 54.3 K MT in 2017. Also, there is no substitute in this application field.

Over the next five years, LPI(LP Information) projects that Petroleum Needle Coke will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
