Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Photo Printing market for 2018-2023.

Photo Printing is the process of producing a final image on paper for viewing, using chemically sensitized paper. The paper is exposed to a photographic negative, a positive transparency (or slide), or a digital image file projected using an enlarger or digital exposure unit such as a Light Jet printer. Alternatively, the negative or transparency may be placed atop the paper and directly exposed, creating a contact print.

The changing lifestyle, adoption of smartphones in developing countries is increasing which in turn increases the social network popularity which leads to an increase in image capturing and also increasing number of smartphones with improved broadband as well as wireless connectivity is expected to boost the growth of online photo sharing through various platforms.

Over the next five years, LPI(LP Information) projects that Photo Printing will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
