## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Photovoltaic pump market for 2018-2023. A Photovoltaic pump (AKA Solar pump) is a pump running on electricity generated by photovoltaic panels or the thermal energy available from collected sunlight as opposed to grid electricity or diesel run water pumps. The operation of solar powered pumps is more economical mainly due to the lower operation and maintenance costs and has less environmental impact than pumps powered by an internal combustion engine (ICE). Solar pumps are useful where grid electricity is unavailable and alternative sources (in particular wind) do not provide sufficient energy.

For the manufacturers, Lorentz and Grundfos are still the leaders in Photovoltaic pump industry, which take up about 25% of production. India manufacturers, such as OCI Group and Tata Power have increased capacity that is because local downstream have a strong demand. For Chinese suppliers of Photovoltaic pump, R&D and manufacturing of the production is just in recent years, therefore, the capacity is low. However, as the government is focusing on the energy saving, the consumption of Photovoltaic pump will increase in the next few years.

Over the next five years, LPI(LP Information) projects that Photovoltaic pump will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.

This report presents a comprehensive overview, market shares, and growth opportunities of Photovoltaic pump market by product type, application, key manufacturers and key regions.
