## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Piston Cylinder market for 2018-2023.

A piston is a disc shaped component that is fitted around reciprocating engines and pneumatic cylinders that works as a moving component contained by the engines. Cylinders are used to convert the fluid power into mechanical motion, wherein pistons help in transforming energy into desired mechanical energy. With an aim to keep the friction at a minimum level and to prevent combustion gases from evading the piston, several metal rings are fitted around the piston.

Over the next five years, LPI(LP Information) projects that Piston Cylinder will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
