The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Plasma Welding Machines market for 2018-2023.

Plasma Welding Machines market, Plasma welding is very similar to TIG welding as the arc is formed between a pointed tungsten electrode and the workpiece. However, by positioning the electrode within the body of the torch, the plasma arc can be separated from the shielding gas envelope. Plasma is then forced through a fine-bore copper nozzle which constricts the arc.

Plasma Welding Machines are the device used for Plasma welding. The major components of the machines are power source, torch, ETC.

The Plasma Welding Machines consumption volume was 41 Units in 2012 and is expected to reach 153 Units in 2016 and 366 Units in 2020, and the volume will decreased to 280 Units in 2022. Europe`s sales volume accounted for the highest market share (47.06%) in 2016, followed by the North America.

At present, the manufactures of Plasma Welding Machines are concentrated in Europe, North America and Asia. The global leading players in this market are Fronius International, Colfax, EWM, Kjellberg, SAF, etc.

The plasma welding machines are mainly used by machinery & equipment, aerospace & defense and automotive. The dominated application of plasma welding machines is machinery & equipment in 2016. The major types of plasma welding machines are

micro plasma welding machines and ordinary plasma welding machines.

Despite the presence of competition problems, due to the increasing demand of welding quality, investors are optimistic about this area, the future will still have more new investment enter the field. The consumption volume will keep increasing till 2022.

Over the next five years, LPI(LP Information) projects that Plasma Welding Machines will register a 3.9% CAGR in terms of revenue, reach US\$ 64 million by 2023, from US\$ 51 million in 2017.
