## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Plastic Filler Masterbatch market for 2018-2023.

Plastic filler masterbatch is concentrate of Calcium Carbonate (CaCO<sub>3</sub>) or Talc in a polymer base. It offers a convenient way of incorporating CaCO<sub>3</sub> and Talc in thermoplastics, without contamination by dust. It has perfect dispersion and optimized flow properties, ensuring easy processing. Plastic filler masterbatch can replace the use of plastic material to save the production cost largely.

Plastic filler masterbatches are based on calcium carbonate and talc. They are used for property modification or for reducing cost and improving processing of plastic products. With new technology develops, plastic filler masterbatch tends to be multifunctional. The gap between filler and the new additives used in the the production of filler masterbatch brings better or new performances into the prodcuts. These features would enable higher content of fillers like calcium carbonate.

Over the next five years, LPI(LP Information) projects that Plastic Filler Masterbatch will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
