The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Polyethylene Oxide (PEO) market for 2018-2023.

This report studies the Polyethylene Oxide (PEO) market, Poly Ethylene Oxide (PEO) is a non-ionic, high molecular weight polymer with good water solubility and heat formative.

PEO was first obtained by Staudinger and Lonmann in 1933 with the molecular weight above 100,000, and then first put into industrial production by Union Carbide Corporation in 1958.

According to the molecular weight, PEO is mainly divided into MW: below 1 million, MW: 1-5 million and MW: above 5 million. MW: 1-5 million holds the most share of PEO with 78.08% in 2017.

To the price of PEO product, smaller and higher molecular weight PEO has a higher price previously, and Dow's products are more concentrated in this type, but these years, the price gap between the different molecular weight is narrowing.

Over the next five years, LPI(LP Information) projects that Polyethylene Oxide (PEO) will register a 5.9% CAGR in terms of revenue, reach US\$ 340 million by 2023, from US\$ 240 million in 2017.
