Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Polytrimethylene Terephthalate (PTT) market for 2018-2023.

Polytrimethylene terephthalate (PTT) is a linear aromatic polyester made by the polycondensation of 1,3-propanediol (PDO) and purified terephthalic acid (PTA). Polytrimethylene terephthalate (PTT) was first synthesized and patented in 1941 (Whinfield and Dickson, 1941) but was not produced commercially due to the expense of one of the precursors, 1,3-propanediol (PDO). The production of PDO was halted in the mid-1960 and ethylene oxide (EO) hydro formulation was developed as an alternative. In the early 1990's, hydro formulation catalyst were created to allow for the economic formulation of PD. through continuous EO hydro formulation.

Demand is driven by demographics and the health of the economy. The profitability of individual companies depends on their ability to bid accurately, secure contracts, and control costs. Large companies enjoy economies of scale in financing and the ability to offer a broad range of services in many locations. Smaller companies can compete effectively by specializing in particular services or focusing on certain geography. Despite fierce competition, due to the global recovery trend, investors are still optimistic about this area; more new investment will enter the field in the future.

Over the next five years, LPI(LP Information) projects that Polytrimethylene Terephthalate (PTT) will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
