## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Polyurea Coatings market for 2018-2023. Polyurea coating is that derived from the reaction product of an isocyanate component and a resin blend component. It has a composition which is a combination of the above-mentioned two coating systems. The isocyanate component can be the same as for the “pure” polyurea systems. The resin blend is a blend of amineterminated and hydroxyl-terminated polymer resins and/or chain extenders. The resin blend may also contain additives, or non-primary components. To bring the reactivity of the hydroxyl-containing resins to the same level of reactivity as the amine-terminated resins, the addition of one or more catalysts is necessary.

Europe, USA and China are the mainly consumption regions due to the larger demand in building & construction and transportation industry. In 2015, USA occupied 27.91% of the global consumption volume, while China takes market share of 15.92%. Leading consumption regions in Europe are Germany, France, UK, and Italy.

The Polyurea Coatings industry has high technical barrier. The products are diversified, making it hard for customers to choose from one and another. Consequently, post sales technical services are crucial to downstream customers. To Polyurea Coatings manufacturers, the core of brand building is in quality control and technological innovation.

Over the next five years, LPI(LP Information) projects that Polyurea Coatings will register a 2.1% CAGR in terms of revenue, reach US\$ 770 million by 2023, from US\$ 680 million in 2017.
