The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Power Line Communication (Plc) Systems market for 2018-2023.

This report studies the Power Line Communication (Plc) Systems market. Power Line Communication (PLC) is a communication technology that enables sending data over existing power cables. This means that, with just power cables running to an electronic device (for example) one can both power it up and at the same time control/retrieve data from it in a half-duplex manner.

The global Power Line Communication (Plc) Systems revenue was \$ 5062.35 million in 2017 and is expected to reach \$ 12175.63 million in 2025, growing at a CAGR of 11.59 % from 2017 to 2025. Europe `s production revenue accounted for the highest market share (32.53%) in 2017, followed by North America and China. Europe is expected to maintain its leading position for the next several years owing to the increasing global downstream demand for Power Line Communication (Plc) Systems.

The Power Line Communication (Plc) Systems are mainly used by Residential, Commercial, Smart Grid and Automotive applications. The dominated application is Smart Grid which accounts for about 42.04 % sales market share in 2017.

Despite the presence of competition problems, due to the global recovery trend is clear, the rising disposable income and customers' expectations for high efficiency and safety of transportation, investors are still optimistic about this area, the future will still have more new investment enter the field. In the next five years, the consumption volume will keep slow increasing, as well as the consumption value.

Over the next five years, LPI(LP Information) projects that Power Line Communication

(Plc) Systems will register a 9.2% CAGR in terms of revenue, reach US\$ 7960 million by 2023, from US\$ 4700 million in 2017.
