Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Power Over Ethernet (POE) Lighting market for 2018-2023.

Power over Ethernet (PoE) uses Ethernet cable networks to transmit power and data through one cable. Ethernet is a tested and trusted solution for transmitting data and low-voltage direct current (DC) power for everything from phone systems to cameras. PoE LED lights use the DC power from the Ethernet cable and eliminate the regularly required alternating current (AC) to DC conversion within each luminaire. As a result, less power is lost, making PoE lighting more energy efficient.

Over the next five years, LPI(LP Information) projects that Power Over Ethernet (POE) Lighting will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
