In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Power Rental market for 2018-2023.

The power rental market is defined as the revenue earned either by renting a temporary power plant or generators. Power is generated by burning fossil fuels such coal, oil, and gas to generate steam that drives large turbines to produce electricity. Power rental is defined as plant hire providing flexibility, reliability, speed, and cost-effectiveness. Moreover, power on rent delivers complete operating power packages and delivers scalable components within large power station installations to various industrial applications.

Geography-wise, the global power rental market is segmented into North America, Asia Pacific, Europe, and Rest of the World (RoW). In 2012, the Middle East and Africa (MEA) market collectively held more than 31% of the overall power rental market. Saudi Arabia in the MEA power rental market is expected to demonstrate high growth in the coming years. The expanding infrastructure, rising construction activities, and the high demand for electricity in remote areas are together driving the Saudi Arabia power rental market. Generators are either used for prime or standby purposes in Saudi Arabia and are completely dependent on grid connectivity. In the same year, the Asia Pacific power rental market held a share of 19% in the global market. The Asia Pacific power rental market is expected to grow at a CAGR of 16.8% during the forecasting horizon. The rising industrialization and urbanization in Asia Pacific is expected to drive the demand for power rental in this region.

Over the next five years, LPI(LP Information) projects that Power Rental will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in

2017.
