In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Powered Pressure Washer market for 2018-2023.

Powered Pressure Washer is a high-pressure mechanical sprayer used to remove loose paint, mold, grime, dust, mud, and dirt from surfaces and objects such as buildings, vehicles and concrete surfaces. The volume of a pressure washer is expressed in gallons or liters per minute, often designed into the pump and not variable. The pressure, expressed in pounds per square inch, pascals, or bar (deprecated but in common usage), is designed into the pump but can be varied by adjusting the unloader valve.

A typical Powered Pressure Washer has electrical powered motor that powers a water pump. The pump accelerates the water, supplied from a garden hose, to produce high pressure. The washer is hooked to a high pressure-rated hose. At the end of the hose is a water gun that looks similar to the pressure guns used at car washes. When the trigger is pulled, the water mixes with the air and comes out of the nozzle.

For the Powered Pressure Washer market, Karcher, TTI, Generac, Briggs&Stratton respectively account for 15.11%, 9.75%, 9.12%, 12.64% market share in 2016, and the sum of the market share percentage held by the largest number of firms in this industry is less than 50%, which indicate that the Powered Pressure Washer industry is perfectly competitive and is considered low concentration.

Over the next five years, LPI(LP Information) projects that Powered Pressure Washer will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
