In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Precast/Prefabricated Construction market for 2018-2023.

Precast Construction Market is a technology wherein the concrete and other construction material are mixed, cast, and cured in a controlled environment at manufacturing units. These prefabricated construction elements are then transported to the site location and assembled. Precast construction technology is used for production of custom-designed components, such as columns, slabs, walls, staircases, girders, and others. The increase in developments in precast technology along with dimensional accuracy provides architects and engineers with a choice of developing unique and breakthrough constructions of exceptional quality. The precast construction method also allows designers and engineers to plan for future construction projects as the components can be rearranged.

Over the next five years, LPI(LP Information) projects that Precast/Prefabricated Construction will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
