## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Prestressed Concrete Cylinder Pipe market for 2018-2023.

Prestressed concrete cylinder pipe (PCCP) consists of a concrete core, a thin steel cylinder, high tensile prestressing wires, and a mortar coating. Concrete's high compressive strength and steel's high tensile strength forms a durable structure that can stand extreme conditions. The thick mortar coating on the pipe protects the steel cylinder, joint rings, and pre-stressing wire from corrosion, which makes it ideal for water transmission, municipal wastewater applications, and industrial piping. PCCP does not require any bracing, compacted bedding, trucking in aggregate, unshrinkable fill, and welding, which makes it easier and economical to install.

Over the next five years, LPI (LP Information) projects that Prestressed Concrete Cylinder Pipe will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
