The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Protein Crystallization and Crystallography market for 2018-2023.

Protein crystallization is the process of formation of a protein crystal. These crystals can then be used in structural biology to study the molecular structure of the protein. Protein crystallography is used to determine the structure of proteins. Cryo-electron microscopy (cryo-EM) is a form of transmission electron microscopy (TEM) where the sample is studied at cryogenic temperatures. Protein molecular structure can also be obtained through Cryo-EM.

Statistics for this report include reagents/consumables and Instruments used in the protein crystallization and crystallography industry.

The technical barriers of protein crystallization and crystallography are relatively high, resulting in several large manufacturing enterprises, such as Rigaku, Jena Bioscience, Bruker, Formulatrix, Art Robbins Instruments, Molecular Dimensions, Tecan, FEI, MiTeGen, and QIAGEN. These companies mainly concentrate in Europe, and USA. North America is the largest consumption market, accounting for almost 40% of total consumption.

Protein crystallization technique is used in various sectors such as biotechnology, pharmaceutical, chemical industries and others. The increasing use of crystallization for protein structure elucidation, increasing R&D by big pharmaceutical and biotechnology firms, technological advancements, and increasing government funding are all factors that are expected to fuel the growth of the market in the near future. However,

insufficiency of qualified and experienced researchers, lack of generalized crystallization methods associated with the types of proteins, and highly time-consuming and expensive protein crystallization and crystallography processes are expected to hinder the growth of this market during the forecasted period.

Over the next five years, LPI(LP Information) projects that Protein Crystallization and Crystallography will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
