## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Proximity Sensors market for 2018-2023.

A proximity sensor is a sensor able to detect the presence of nearby objects without any physical contact. Proximity sensors are commonly used in mobile devices. When the target is within nominal range the device lock screen UI will appear, thus emerging from what is known as sleep mode. Proximity sensors can have a high reliability and long functional life because of the absence of mechanical parts and lack of physical contact between sensor and the sensed object.

Rising trend of process automation in factories and the continuous growth of smartphone and tablet market, largely drive the proximity & displacement sensors market. The increase in consumer electronics industry has been the key factor driving the growth of the proximity sensor market. Growing need for accurate detection in the vehicles in order to prevent collisions is expected to have positive impact on the growth of the market.

Growing popularity towards contactless sensing applications and the interest of automobile manufacturers towards the integration of sensor technology in automotive security and infotainment systems will boost the market for proximity and displacement sensors. Recent developments in capacitive proximity detecting innovation that tends to have a few problems of IR sensors innovation could discover varied use in cell phones. Medical devices such as glucose monitors, ECG/KCG monitors and blood pressure monitors are also integrated with the proximity sensors. These factors are expected to contribute towards growing opportunity of the global proximity sensors significantly.

Over the next five years, LPI(LP Information) projects that Proximity Sensors will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
