Residential Building Shade Facilities

This report studies the Solar Shading Systems market, Solar Shading Systems is Shading against solar heat gain is the most readily applicable and flexible method of cooling and can be applied in all climate types in which the sun's influence is significant, and to almost all modern buildings irrespective of latitude. The key to good daylighting and thermal performance lies in the design of the building envelope. Shading devices can be an integral part of the envelope, and thus influence thermal and daylighting performance. They may be located at the external or internal face of the facade, or within double- and triple- glazed window or curtain wall systems. In each case solar radiation is prevented, wholly or partly, from entering the building. By intercepting solar radiation before it reaches the building, external devices are the most. They include motors to control the shades.

At present, in the foreign industrial developed countries the Solar Shading Systems industry is generally at a more advanced level, the world's large enterprises and production are mainly concentrated in the United States, Europe, etc. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position.

The North America Solar Shading Systems market will reached a revenue of approximately 389.21 M USD in 2016, and is expected to reach 544.64 M USD in 2023.

The North America Solar Shading Systems industry reached a sales volume of approximately 2447.0 K Sq.m in 2016, and is expected to reach 3246.4 K Sq.m in 2023.
