In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Radiation Hardened Electronics and Semiconductors market for 2018-2023.

Radiation hardening is a technique of making electronics and semiconductors devices resistant to damage caused by radiation. Radiation hardened devices are primarily used in high altitude applications where radiation could damage functioning of electronic components. Radiation tolerant components are employed in satellite system power supply, switching regulators, and microprocessors in military and space applications. The prevention of gamma radiation and neutron radiation caused by nuclear reactors is possible due to radiation hardened components.

Over the next five years, LPI(LP Information) projects that Radiation Hardened Electronics and Semiconductors will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
