In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Recessed Lighting market for 2018-2023.

A recessed light (also known as can lights or downlight) is a light fixture that is installed into a hollow opening in a ceiling. When installed it appears to have light shining from a hole in the ceiling, concentrating the light in a downward direction as a broad floodlight or narrow spotlight.

Recessed Lighting fixtures are comprised of three main parts, namely, the bulb, decorative trim and the housing.

Recessed lights have remained a favorite choice for modern, streamlined lighting in kitchens, bathrooms, hallways, basements, and in commercial spaces. They are used for both accent and general lighting, and because they are relatively compact, they work wonderfully in small spaces.

At present, in the foreign industrial developed countries the Recessed Lighting industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in Asia.

Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area and in future still more new investment will enter into the field. Technology and cost are two major problems.

Although sales of Recessed Lighting brought a lot of opportunities, for the new entrants with only advantage in capital without sufficient support in technology and downstream channels, the research group did not recommend taking risk to enter this market.

Over the next five years, LPI(LP Information) projects that Recessed Lighting will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx

million in 2017.
