Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Recombinant Hamster Ovary Cell (CHO) Hepatitis B Vaccine market for 2018-2023.

Hepatitis B is a viral infection caused due to transmission of the virus through contact with the blood or other body fluids of an infected person. It is considered as a serious occupational hazard for healthcare professionals, which affects the liver, causing acute and chronic diseases. Hence, Chinese hamster ovary cell (CHO) hepatitis B vaccine is considered to be the safe and effective method to prevent the hepatitis B infection. The major factor that fuels the growth of the market are increase in prevalence of hepatitis B infection worldwide. For example, approximately 887,000 deaths due to hepatitis B infection were recorded in 2015 across the globe. However, inherent disadvantages of using recombinant Chinese hamster ovary cell (CHO) to design hepatitis B vaccines restrains the growth of the market. Conversely, increase in government focus to promote (CHO) hepatitis B vaccination for adults and extensive research carried out for the same are expected to offer lucrative opportunities for the market.

Over the next five years, LPI(LP Information) projects that Recombinant Hamster Ovary Cell (CHO) Hepatitis B Vaccine will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
