In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Refrigeration and Air Conditioning Compressor market for 2018-2023.

Refrigerant Compressors are driven fluid machines enhance a high-pressure gas from low-pressure gas. It is the heart of the refrigeration system. It sucked in from the suction pipe temperature low-pressure refrigerant gas, through motor driven piston compressor to exhaust high temperature and pressure refrigerant gas to provide power for the refrigeration cycle, in order to achieve compression ? condensation (exothermic) ? expansion ? evaporation (heat absorption) of the refrigeration cycle.

Air Compressor is a device that converts power (usually from an electric motor, a diesel engine or a gasoline engine) into kinetic energy by compressing and pressurizing air. The energy in the compressed air can be stored while the air remains pressurized. The energy can be used for a variety of applications, usually by utilizing the kinetic energy of the air as it is depressurized.

Refrigerant Compressors industry concentration is very fragmented, manufacturers are mostly in the Asia Pacific and Europe. As for the sales market, China output accounted for more than 54.50% of the total output of global Refrigerant Compressors market in 2016. GMCC is the world leading manufacturer in global Refrigerant Compressors market with the market share of 15.64%, in terms of sales revenue, followed by Landa, Highly, Embraco and Panasonic.

Air Compressor product demand market there is also a certain space, but basically showing the scarcity of high-end products, low-end products, excess capacity, there is a large market demand for high-end products to seize market share of imports acts, local enterprises export more low-end products overcapacity or molding process basic

Materials.
