## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Rehabilitation Robotics market for 2018-2023.

Rehabilitation Robotics is a field of research dedicated to understanding and augmenting rehabilitation through the application of robotic devices. Rehabilitation robotics includes development of robotic devices tailored for assisting different sensorimotor functions (e.g. arm, hand, leg, ankle), development of different schemes of assisting therapeutic training, and assessment of sensorimotor performance (ability to move) of patient; here, robots are used mainly as therapy aids instead of assistive devices. Rehabilitation using robotics is generally well tolerated by patients, and has been found to be an effective adjunct to therapy in individuals suffering from motor impairments, especially due to stroke.

In the future, rehabilitation robots will develop towards intelligent, operation more simple. Robots will be able to observe the user's intent, according to the user's instructions to complete the various operations. Rehabilitation robots will be more human. Rehabilitation robot design should be more consider a patient's physiological and psychological characteristics. The robot's color, shape, behavior can let a person feel more comfortable.

Over the next five years, LPI(LP Information) projects that Rehabilitation Robotics will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
