In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global Rehabilitation Robotics market for 2018-2023.

Rehabilitation Robotics is a field of research dedicated to understanding and augmenting rehabilitation through the application of robotic devices. Rehabilitation robotics includes development of robotic devices tailored for assisting different sensorimotor functions (e.g. arm, hand, leg, ankle), development of different schemes of assisting therapeutic training, and assessment of sensorimotor performance (ability to move) of patient; here, robots are used mainly as therapy aids instead of assistive devices. Rehabilitation using robotics is generally well tolerated by patients, and has been found to be an effective adjunct to therapy in individuals suffering from motor impairments, especially due to stroke.

The technical barriers of Rehabilitation Robotics are relatively high, resulting in high level concentration degree. The key companies in Rehabilitation Robotics market are AlterG, Hocoma and Ekso Bionics, etc. The enterprises are concentrated in USA and Europe. USA is the largest production and sales country, occupied about 30% of global sales market in 2017.

According to applications, Rehabilitation Robotics is used in sports and orthopedic medicine, neurorehabilitation and military strength training. In 2017, rehabilitation robotics for sports and orthopedic medicine occupied more than 60.9% of total amount. According to types, rehabilitation robotics is split into lower extremity rehabilitation robotics, upper extremity rehabilitation robotics and exoskeleton rehabilitation robotics, lower extremity rehabilitation robotics is the largest market with the share of 52.3% in 2017.

Over the next five years, LPI(LP Information) projects that Rehabilitation Robotics will register a 19.6% CAGR in terms of revenue, reach US\$ 230 million by 2023, from US\$ 78 million in 2017.
