In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Resilient Flooring market for 2018-2023. Resilient flooring is made of materials that have some elasticity, giving the flooring a degree of flexibility. The resilient flooring category includes luxury vinyl tiles (LVT), vinyl composite tile (VCT), vinyl sheets, linoleum, cork, rubber, and other types of synthetic flooring.

Resilient flooring is widely used in educational, institutional, healthcare / hospital, hospitality, light commercial, light industrial, office, retail / stores, transportation / public venues, and others. As the demand increases rapidly for downstream industries, the demand for resilient flooring will correspondingly increase. The increased consumption of resilient flooring is expected to continue during the remaining years of the forecast period of 2017-2022. Resilient flooring industry will usher in a stable growth space.

In the past few years, the price of resilient flooring gradually decreased and expected the price will not increase with the production released. As the same time, the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of resilient flooring. Therefore, to some extent, the companies face the risk of profit decline.

There are companies adding new capacities and aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The competition in resilient flooring market remains intense.

Over the next five years, LPI(LP Information) projects that Resilient Flooring will register a 7.0% CAGR in terms of revenue, reach US\$ 16600 million by 2023, from US\$ 11100

million in 2017.
