Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Reverse Transcriptase market for 2018-2023.

Normally, DNA is transcribed, or copied, to RNA and then translated to protein. Reverse transcriptase copies RNA back to DNA. Think of it as a car moving down a one-way street. Normally traffic only moves in one direction. But then, someone from out of town is driving the opposite way! Reverse transcriptase drives the opposite way in molecular processes in cells, converting RNA back to DNA.

Although it is very different from the normal process, reverse transcriptase is an important enzyme. It is needed for function in viruses, eukaryotes and prokaryotes. Reverse transcriptase enzymes in cells are involved in genetic diversity and in the process of aging in eukaryotic cells. In viruses, reverse transcriptase allows the virus to insert its DNA to the host cell's DNA, forcing the cell to make more viruses. This is good for the virus but bad for the host.

In the last several years, global market of Reverse Transcriptase developed smoothly, with an average growth rate of 4.6 %. In 2016, global revenue of Reverse Transcriptase is nearly 260 million USD; the actual production is about 570 liter.

The classification of Reverse Transcriptase includes MMLV Reverse Transcriptase and AMV Reverse Transcriptase; Moloney Murine Leukemia Virus (MMLV) Reverse Transcriptase is an RNA-directed DNA polymerase. This enzyme can synthesize a complementary DNA strand initiating from a primer using either RNA (cDNA synthesis) or single-stranded DNA as a template. And the sales proportion of MMLV Reverse Transcriptase in 2016 is about 80.9%.

Reverse Transcriptase can be used for PCR, Sequencing and Cloning, PCR was the largest application segment in 2016, and the proportion is about 59.4%. The application used in cloning with the fastest growth rate.

Over the next five years, LPI(LP Information) projects that Reverse Transcriptase will register a 3.7% CAGR in terms of revenue, reach US\$ 330 million by 2023, from US\$ 270 million in 2017.
