Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Road Roller market for 2018-2023.

A road roller, sometimes also called roller-Road Roller, or just roller, is a type of engineering vehicle used to compact soil, gravel, concrete, or asphalt in the construction of roads. In addition, rollers are also used at landfills or in agriculture. In some parts of the world, road rollers are still known as steam rollers, regardless of their method of propulsion.

Due to its application nature, the road roller industry tends to exhibit a relatively high correlation with the growth rate of general economy, particularly in those emerging economies whereby the economic growth model is largely investment driven, including countries like China, India, Brazil and other fast-growing southeastern nations. Because in those countries, the economy is still rapidly expanding and many roads, airports and industrial parks need to be built every year in an effort to lower the business cost for enterprises, which creates enormous demand for road rollers of various types.

Road roller industry is a truly vibrant and highly prospective business in China, which is evidenced by the stunning year-on-year growth rate both in the production capacity and sales volume over the past ten years or so. However, with Chinese economy gradually maturing and shifting to a more sustainable footing whereby consumption becomes the main driving force of future economic growth, the slowdown in the road roller industry expansion would eventually become reality. This means the high growth rate in this industry would probably be over in about 5-10 years.

Over the next five years, LPI(LP Information) projects that Road Roller will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in

2017.
